## Latest progress – January 2019

### Street Lighting – Edinburgh Way

We have now completed the cabling to all of the newly installed lighting columns along Edinburgh way. The columns on the north side of the scheme have now been switched on and the old green columns removed providing working space for the upcoming drainage works.

### Interesting fact –

The old lighting columns were 10m high and the new ones are 12m high to provide the relevant lighting levels across the dual carriageway once the scheme is complete. Using the permanent lighting to light the construction works means we don't require temporary lighting reducing our carbon footprint.

New 12m galvanised columns installed and now lit

Old 10m green columns installed and now lit

## Latest progress – January 2019

### Edinburgh Way – Statutory Services

Affinity water have now completed all of the water pipe diversion along the scheme allowing all excavations to be back filled and the works area made safe. Openreach are on site installing new fibre optic and copper cables into all of the newly installed ducts across the scheme. These works are required so that the services do not run under the new carriageway once it is completed.

### Interesting fact –

All of our statutory service diversions and duct excavations are being back filled with recycled type 1 as an environmentally friendly construction process.

### Edinburgh Way – Southern Side Footpath

Following on from Affinity Water completing the water main connection we have now completed construction of the southern side footpath. The new footpath has been opened to the public and provides good quality access from Harlow Mill Roundabout to River Way roundabout along the southern side of the scheme. The new footpath on the Southern side of the scheme will allow us to install 4m deep drainage to the northern side of the scheme while keeping the work and the public separated and therefore safe. This will involve the public having to go the longer way around Harlow Mill Roundabout to access Harlow Mill Train Station. Please bare with us as we will have large construction equipment in place and don't want to harm anybody.

## Latest progress – January 2019

### Edinburgh Way – Traffic Switch

With the footpath now completed on the southern side of the scheme we have been able to move all of the traffic as far south on Edinburgh Way as safely possible while still maintaining one lane of traffic in each direction. You will notice that this has increased the working space to the northern side of the scheme in preparation for the drainage installation works due to happen during February 2019.

**Please keep an eye on these boards for further notices and updates**
