1	Scheme	e Sc	hedule:	All Schemes						
3			Original Budget	£1,000,000		CAPITAL spent	£0		CAPITAL Remaining	£1,000,000
			% allocated	0%		REVENUE spent	£0		REVENUE	£129,000
5									remaining	,
6	Capital or Revenue	Ref	Location	Description	Requested by	Scheme Category	Scheme stage	Cost Code	Allocated Budget	Comments
7	ps		The strood	Option 1 - Fixed Signing. Standard warning signs on all approaches with a sub plate stating 'Road liable to flooding' these have been provided on grey backing boards to increase visibility. A 'Try your brakes warning triangle' has been shown on the back of each assembly for vehicles leaving the causeway. • Depth Markers on each approach, in order for these to be effective a full level survey of the length will need to be undertaken to ensure that they are set to show the water level at the deepest point.	LHP	Traffic Management	Implementation	LCOL142084	£10,000	(Please see Technical Note DC1711)This option has a number of benefits over the options including; • No Legal implications – drivers make their own assessment. • No maintenance implications (over and above any other standard signing) • No maintenance implications (over and above any other standard signing) • DFT approval not required • Shorter implementation time (all standard off the shelf elements). • Low cost solution
8	PS		Riverside Estate	Feasibility design for 20mph limit/zone - LHP requested minimal signage	RIVERSIDE ESTATE RESIDENTS ASSOCIATION	Traffic Management	Feasibility	LCOL142085	£3,000	Lit terminal signs and repeaters will have to be installed once a public consultation is carried out. Speed Survey Results: Guildford Road: Southbound 7 day average speeds: 25.3mph Northbound 7 day average speeds: 24.4mph  Worcester Road: Eastbound 7 day average speeds: 16.5mph Westbound 7 day average speeds: 17.0mph  Lincoln Way: Southbound 7 day average speeds: 16.9mph Northbound 7 day average speeds: 16.1mph  Exeter Drive: Eastbound 7 day average speeds: 19.9mph Westbound 7 day average speeds: 19.9mph
9	ps		London Road jct Lucy Lane South	Feasibility, studies, Modelling and detailed design	Clir Scott-Boutell	Traffic Management	Studies	LCOL142135	£15,000	Junction redesign completed ( <b>DC3333</b> ). The suggestion is to remove the existing Zebra and install Traffic Signals at the junction and relocate the existing Bus Stop. The Traffic Signals will control the vehicles and still allow pedestrians to cross.
10	ps		Goojerat Road/ Circular Road West	zebra crossing	Clir Barton	Traffic Management	Total scheme	LCOL142021	£40,000	The PV <sup>2</sup> score warrants a crossing at this location, the road is straight and visibility on both approaches is good. There is currently an uncontrolled crossing point at this location (width 3m) and footway width on both sides are good, there is plenty of verge to install beacons and additional street lighting

	Α	В	С	D	E	F	G	Н	ı	J
11	ps		Warren Lane, Stanway	Feasibility for footpath	Cllr J Scott-Boutell	Traffic Management	Feasibility	LCOL142092	£5,000	There would need to be some consultation with the residents at the cottage discussing whether they would be willing to donate 1.8m of the frontages so that a footway could be constructed. It is thought the best way forward at this point would be a feasibility study to determine whether the residents would be open to donating some land and also determine what the cost of constructing a footway would be.
12	ps		Ardleigh road, Dedham	VAS	Dedham PC and Cllr Brown	Traffic Management	Total scheme	LCOL142124	£9,500	The speeds on Ardleigh road meet the criteria for a VAS in both directions. However there is an existing VAS opposite the junction of Hunters way therefore it is recommended to install 1 x VAS on Ardleigh road.
13	ps		Northern Approach Road	PV2	Cllr Goss	Walking	Studies	LCOL142133	£900	There are numerous parents and young children who try to cross from Wallace Road at the Northern Approach Road to attend Queen Boudica School on the Northfields estate as there is a direct route
14	ps		Monkwick Estate	Feasibility	Cllrs Mudie/ Barton	Cycling	Feasibility	LCOL144001	£3,000	Cycle route to and from schools feasibility study be carried out to determine whether a cycle route can be established
15	ps		Maldon Road/Butts Road ladder roads	20 MPH	Cllr lissimore	Traffic Management	Total scheme	LCOL142136	£15,000	The speed compliance on these roads are excellent and already fall near to (and under in some circumstances) 20mph. It seems an unnecessary expense to formalise speeds that are already being achieved. Beaconsfield Road: SE bound 23.3 NW bound 18.3 Salisbury Avenue: SE bound 23.9 Errington Road: SE bound 23mph NW bound 19.4 Hamilton Road: SE bound 19 NW bound 16.4 Constantine Road: SE bound 21 NW bound 14.5 St. Helena Road: S bound 22.9 N bound 20.1
16	ps		Culver Street Colchester	Dropped Kerbs x 4	Cllr lissimore/Cllr Quince	Traffic Management	Total scheme	LCOL142115	£10,000	This is a conservation area by the looks of it so granite kerb will be needed

#### <u>Technical note: DC1711 The Strood – High Tide Warning Options</u>

Following the site meeting on 02/01/2014 at 8:30 am between Cllr John Jowers, Cllr Ann Brown, Rob Macdonald (HLO) and Paul Norris (Engineer) at the above location, the following was agreed:

- Option 2 + 3 in the report (Dynamic flood warning / information signs) were discounted on the grounds of cost and the potential for litigation.
- Option 1 (Depth Gauges) and additional static warning signs were also discussed and it was agreed that this would be beneficial. It was explained that the gauges would be set to display the water depth at the deepest point on the crossing and that these would be located close to the limits of the flooding so road users would be informed of the depth at the deepest point. It was agreed that a topographical survey would be undertaken to ensure that the deepest point was established and following this the depth gauges should be installed as soon as possible.
- Cllr Jowers expressed concern with regard to night time incidents, and reported that these can/have resulted in serious injury. Various options were discussed to address this issue and it was agreed that the RNLI and Essex Fire and Rescue would be contacted, and a method of recording incidents involving the high tide would be agreed. This will allow us to properly quantify the magnitude of this issue and any common factors (i.e. time of day/night, direction of travel, driver origin, fog, rain, etc.). This data should allow us to draw conclusions on the factors which contribute to these incidents, and therefore apply measures to reduce these risks.

#### **Actions**

- HLO to agree funding for survey + detailed design at next LHP meeting.
- Following completion of the survey + design, costs for implementation to be confirmed and agreed with LHP.
- HLO to discuss incident monitoring process with LHP and if funding for this is agreed it should be implemented as soon as possible, and reviewed annually with a view to agreeing appropriate measures to address any patterns that emerge in due course.

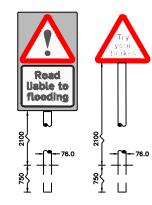

### Sign Assembly A

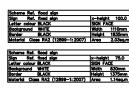

New depth markers to be located as shown - depth to be calculated relative to lowest point on the carriageway throughout the crossing and vertical position to be set accordingly for all depth markers. (for example if the the lowest point is 300mm below the existing ground level at the depth marker location, 300mm must be removed from the bottom of the marker, to allow the depth at the lowest point to be

Sign to be mounted on 1 new 76mm post on a 600mm square foundation at the back of footway adjacent to the post and rail fence (on the footway side).

Metric depth markers were considered however under the Traffic Sign Regulations and General Directions 2002 - where metric measurements are used imperial must also be shown, this results in the depth marker being increased in width from 225mm to 615mm which is considered to be to intrusive on the footway not so visible from a distance.

Front View Rear View

Sign Assembly B

New warning sign assemblies to diagram 562,563 and 554.1 be located as shown - to be mounted at 2.3m with 450mm clearance to carriageway on a 76mm post, foundation to be 800mm square. 'try your brakes' warning sign to be provided on the back of the signs to face traffic leaving the causeway.

These shall be of size 750mm on two signs located on Mersea Island and 900mm on the mainland - where trimming may be required to ensure suitable forward visibility.

General Construction Notes

- . Do not scale. This drawing is to be read in conjunction with all other contract drawings and documents. This drawing is feasibility only.
- 2. All works to be in accordance with the Department of Transports Specification for Highway Works and Essex County Council Specifications and Standard Constructio
- 3. All traffic signs and lines are to comply with The Traffic Signs Regulations and General Directions 2002. or to receive site specific approval.
- Location of all new signs to be verified on site prior to erection. When erected sign plates shall have a desirable clearance of 1.0m from the edge of the carriageway. The absolute minimum clearance from the sign plate to the edge of carriageway shall be 450mm. Following erection of signs any overhanging trees or bushes shall be lopped or trimmed to ensure proper visibility to the sign. Where such trees or bushes are located in private property the Contractor shall not trim or lop the trees or bushes until the permission of the owner has been obtained for these works.
- 5. Highway boundary checks are required to establish ownership prior to the erection of any street furniture.
